

1

## Water is Worth It!

8 to 10 ounces a day will help keep your throat hydrated and vocal cords lubricated.

## It's a Date!

Schedule regular checkups and treat ear infections immediately. Untreated infections may lead to hearing loss.

5

## Sensible Swallowing

Slowing down, sitting up straight, and sipping liquids between bites can all help with swallowing difficulties at meal time.

7

## Keep it Quiet!

Yelling causes too much stress on the vocal cords and can cause damage leading to voice loss.

2

# 10 tips FOR BETTER SPEECH & HEARING

## Decibel Danger

8

Firecracker - 150 dB  
Nightclubs - 120 dB  
Rock Concert - 125 dB  
Ambulance Siren - 120 dB  
Know what hurts.  
Normal talking is only 60 dB

3

## Tot Talk

Ask your toddler open-ended questions to encourage healthy speech development.

## Read With Me!

Talking, reading and playing with your child daily will promote healthy speech.

9

## Have a Hard Head!

Prevent language disorders caused by brain injury. Always wear a helmet when biking, skateboarding or taking part in other sports.

4

## Wear a Pair!

Use ear protection such as plugs or muffs when exposed to sounds over 85 db. If you can't hear a person talking one metre (three feet) away over the sound, it is too loud.

## Tone it Down!

Use the 60-60 rule. When listening to headphones, keep the volume at 60 per cent of the maximum level for no more than 60 minutes a day.
