

Principes de géographie du Canada – Grade 9- Academic

CGC 1DF

This course draws on a variety of frameworks, such as the ecozone framework and principles of physical, human and economic geography, to explore Canada's distinct and evolving character. Students will investigate the interconnections among the landforms, climate, soils, plants, animals, and human activities in Canadian ecozones to develop geographic knowledge and skills that contribute to an understanding of Canada's diversity and its role in the world. This course will be taught in the French language.
